Applicator Training for New Applicators

Asmark Institute and AGCO Corporation collaborated to offer a new training program dedicated to educating and developing professional applicators.

The 2018 Applicator Training Course for New Applicators (0-3 years experience) will start on June 19th and provide a comprehensive program of professional training to newly hired applicators and those with up to three years of experience in liquid and dry application.

Ten acres serve as the proving grounds for this state-of-the-art training facility. A mile of all-weather track has been strategically designed to provide the most realistic hands-on driving experience possible. More than a million dollars in equipment is used to facilitate this unique learning process over the four-day course.

A variety of exercises reinforce the learning process and help to familiarize the participants with the basic skills required for becoming a professional operator.

The course curriculum is built on extensive feedback AGCO and the Asmark Institute have gathered from ag retailers and industry partners.

Each course will consist of 3-1/2 days of training. **Greg Yoder** and **Gary Cornell**, experienced applicators and retailers with 75 years of combined experience, will be the lead instructors for the course.

Classes are limited, so Register Today!
